

kozii™

breastmilk warmer & bottle warmer

 SAFEHeat™ Technology

nurture
your
nutrients™

kozii is specially designed to warm as gently as possible, and to preserve the delicate nutrients, proteins, and antibodies in breastmilk.

 kiinde™

Introducing kozii.

The safe, fast, and beautifully simple way to warm your child's meal. Breastmilk, formula, or food, in any container.

Designed specifically to follow CDC and USDA guidelines to safely thaw and warm breastmilk using warm, flowing water.

SAFE

Low temperature warming preserves precious nutrients in your baby's meal.

Auto shutoff timer completely stops warming when time is up.

FAST

Convective heating is uniform, consistent, convenient, and very FAST.

EASY

Onboard reservoir means no measuring or adding water with each use.

UNIVERSAL

Safe and fast thawing and warming for breastmilk, formula or food in glass, metal, plastics, bags or bottles.

 **SAFEHeat™** is a patent-pending technology that uses a swirling bath of warm water to gently and quickly thaw and warm your baby's meal.

“ Growing concerns about nutrient damage, hot spots, and plastic containers that release dangerous chemicals have underscored the importance of warming meals without exposing bags and bottles to dangerous steam, hot or boiling water, or the microwave. ”

How kozii works

- SAFEHeat™ makes the warming process safer and faster by changing the fundamental mechanism used to transfer heat to the bottle or bag. A circulating bath of warm water improves warming efficiency, allowing the use of lower temperature water without compromising warming speed. The thermostatically controlled water bath is maintained at the temperature of warm tap water, but warms a bottle as quickly as warmers that reach boiling temperatures. The result is a warmer that is fast and safe for use with any type of bottle or bag, and is designed for the needs of breast milk.
- SAFEHeat™ ensures that the contents of the warmer are brought to the same temperature every time as easily as possible. A simple, easy to read timer allows the user to set the desired warming time by simply turning the knob.
- When the time is up, the warming stops completely, eliminating the risk of overheating if the bottle or bag is left in kozii for longer than intended.
- Just rinse and refill periodically, and that's it! See instructions manual for complete use, care, and cleaning instructions.

kozii™

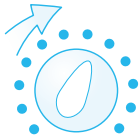

1

Insert bag, bottle or food container.

2

Set timer.

3

Enjoy!
Your baby's meal is warm and ready.
